Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-2, 4-16, 23-25, 29-32, drawn to a print head apparatus having pressure sensors for detecting pressure wave induced by a firing of an ink expulsion mechanism, classified in class 347, subclass 56.
- II. Claims 17, 19-22, 26-27, drawn to a method of monitoring performance of a printhead or detecting a misfiring nozzle in a printhead, classified in class 347, subclass 19.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the method of monitoring the performance of a printhead or detecting a misfiring nozzle in a printhead can be done by an other printing apparatus that has a sensing mechanism located outside the printhead such as an optical device or an electromagnetic field detector.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
